VITAMIN A

A2Z Project Global Micronutrients Toolkit

Improving and saving the lives of mothers and children in resource-constrained areas of the world is the driving force of the A2Z Project. From 2005-2011, the project made significant contributions worldwide in four technical areas: Child Anemia, Maternal Anemia, Vitamin A supplementation and Food Fortification. Overarching strategies have directly addressed the key issues of stakeholder engagement and ownership, health system strengthening, capacity building, using data for decision-making, and improving resource allocation and logistics supply at the country level. The uniquely designed, practical, and powerful tools included in the A2Z Global Micronutrients Toolkit are the product of real world testing and proven experience. The A2Z Project is pleased to share the Global Micronutrients Toolkit with the international development community for adoption and adaptation to make a difference in the health and wellbeing of mothers and children through preventive interventions.

CHILD ANEMIA REDUCTION PROGRAM TOOLS

Intended for use with front line health workers, these tools incorporate the reduction of child anemia within an integrated set of basic health practices to improve the health of mothers and children in India.

MATERNAL ANEMIA REDUCTION PROGRAM TOOLS

The Global Toolkit includes a package of tools that supports successful program design, implementation, management, and evaluation of activities to reduce anemia and improve the maternal health.

FOOD FORTIFICATION TOOLS

The food fortification tools developed by the A2Z Project showcase the experience of governments, food industry, laboratories, and local institutions in East, Central and Southern African countries and Palestine.

VITAMIN A SUPPLEMENTATION TOOLS

The Global Toolkit includes a set of tools developed by the A2Z Project and partners to support governments in their efforts to ensure sustainable Vitamin A supplementation and de-worming program delivery mechanisms.
